

INSIDE

DIMITRI'S LAB

Hiya futur scientist! Welcome to my lab.

TANGLEBAY FRIENDS

INSIDE

DIMITRI'S LAB

Hiya futur scientist! Welcome to my lab.

This is where you get to become **my assistant**, so together we study every single **tanglebay's friends and their little biology secrets** 
But before, you have to sign your contract and become official !

Reaserch Contract

We,

_____

_____

Accept to officially become Dimitri's assistant team, and to help him in the following missions:

 Analayze the animals of Tanglebays and debunk their biology secrets

 Discover how sometimes human and animals use the same mechanisms

DIMITRI'S LAB

YAAY, you're now onboard my very official assistant.
Welcome!

The Command Center Sheet

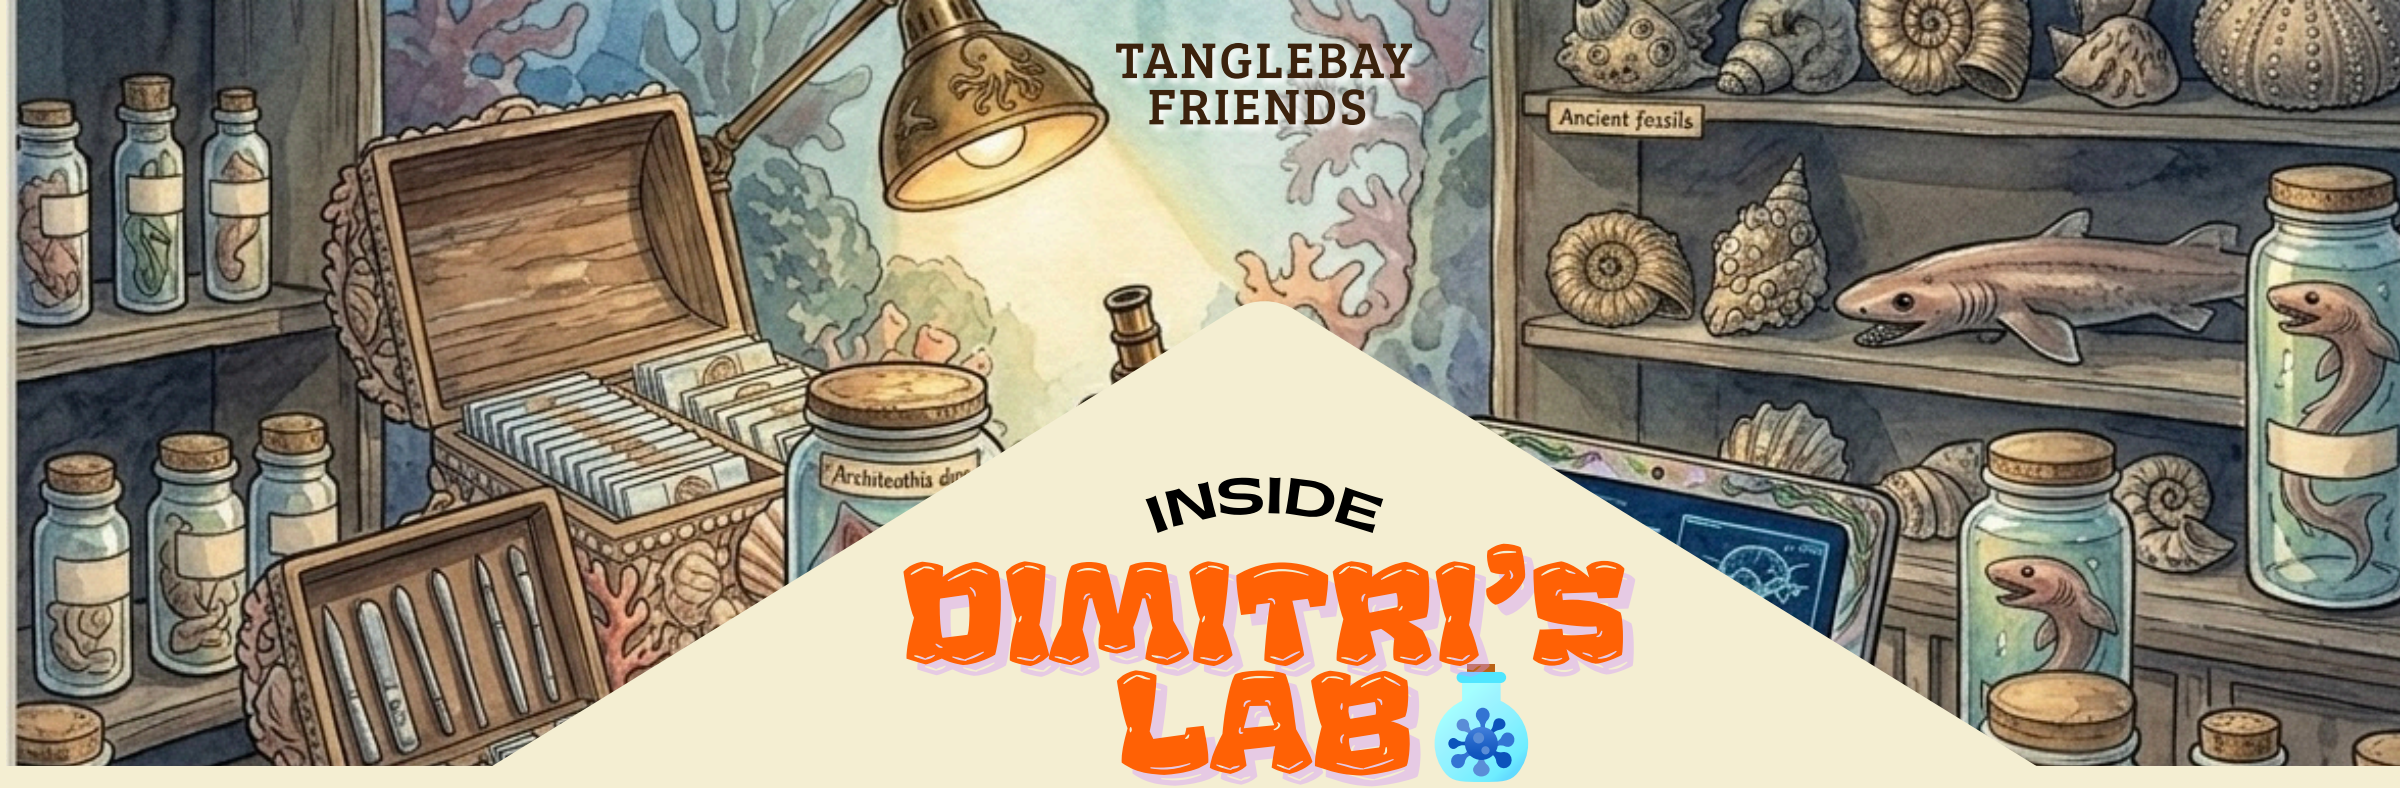

This sheet is your official Command Center.
Each time you finish a friend, you can tick his name off the list below.

Level 1: Junior Researcher

- ☐ Ricky
- ☐ Erica
- ☐ Honey

Level 2: Research genius

- ☐ Dimitri
- ☐ Mimi
- ☐ Leon

DIMITRI'S LAB

Friend N___

Cut its profile picture from the coin sheet and glue it here

NAME : _____

ANIMAL : _____ ____

Your time to shine now!
First, which friend are we studiying here? Note his identity

Recall his biology secret in your own words

Part 1: The Adaptation

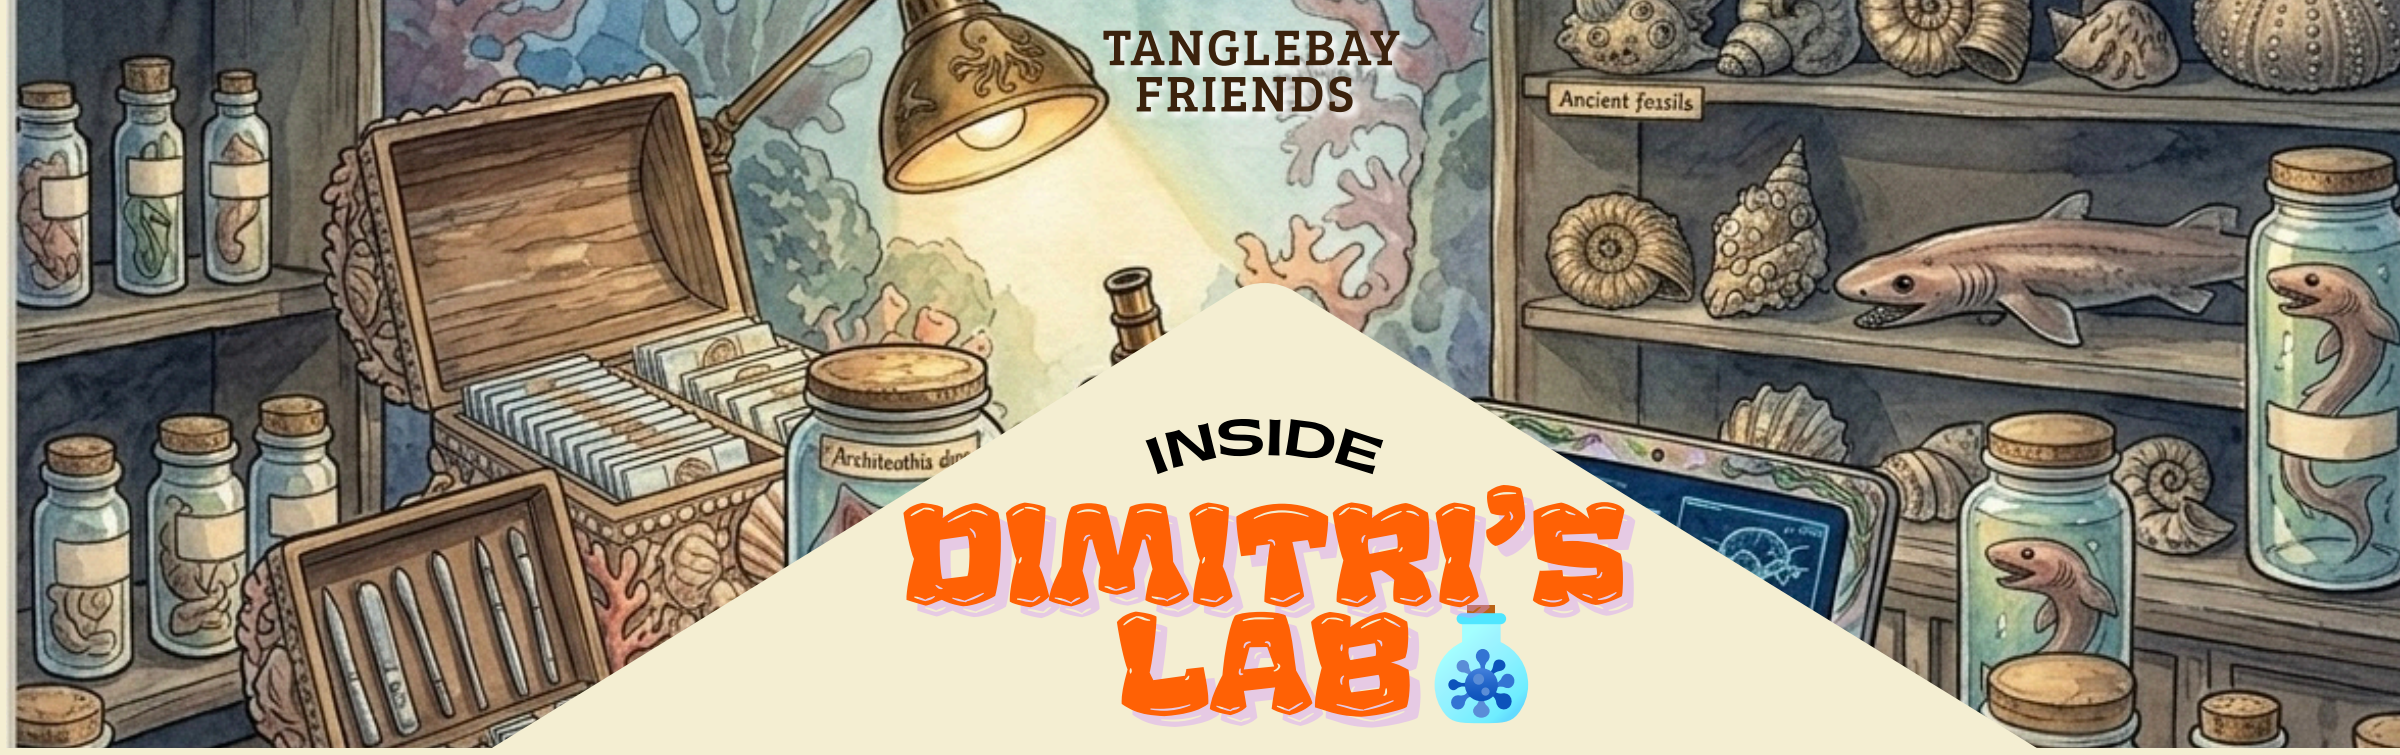

1. The challenges

What made this friend's life challenging?

2. The adaptation

What solution did nature find?

Part 2: The Implications

3. The consequences

With that adaptation, what changed in this friend's life, or what new habit came?

Part 3: Biomimicry

Here comes my favorite part, hahaha!

A lot of things you humans do are quite the same as what us animals do! I personnally call it **human copy cats**, but science like to call it **Biomimicry.**

Boring word, I know!

So now, **your task is to find every human copy cat,** oups, **biomimicry examples in human life that copies the same system as animals.**

See my example below!

Wear shells because body is vulnerable to..um.. everything

Wear sweatshirts because their bodies are vulnerable to the cold

Part 3: Biomimicry

Simple, right?

This page is yours. You can note down as many **copy cat**/ **biomimicry** example as you can find. ***I want to see plenty!***

Good luck, scientist ! 

What do human do that is similar to what this friend does?
